

# Ermetic for Cloud Inventory Management

Take control of your multicloud environment with complete visibility

Security in the cloud is difficult to operationalize because of the inherent lack of visibility into the many resources in cloud environments. Ideally, this mission-critical information would be acquired directly from cloud vendors themselves. In reality, organizations find themselves using a patchwork of tools that take time to deploy, are cumbersome to manage, and leave visibility and security gaps due to incomplete coverage. To make matters worse, when critical risks are found, resolving them involves complex processes spread across multiple teams in the organization.

## Why Ermetic Cloud Inventory Management?

- **Continuous Discovery:** Get a deep, multi-dimensional, searchable view into all human and service identities, resources, entitlements and configurations in your multi cloud environment.
- **Wide Coverage Scope:** Automatically detect and categorize resources in your multicloud environment across identity, data, compute, network and federated identities.
- **Automated Classification:** Granular, automated resource labels and tagging help pinpoint toxic scenarios that pose the highest risk to your multicloud environments.

## Deep Multicloud Visibility

Ermetic cuts through cloud infrastructure complexity to proactively minimize your cloud attack surface and the damage that could follow a breach. The Ermetic Platform includes two core capabilities:

### Instant Insights and Powerful Search

Leveraging a centralized, customizable dashboard teams have the needed coverage to instantly assess and answer questions like:

- How many resources are exposed?
- How many entitlements are excessive?
- Where to improve compliance?
- What are my top risks?

### Automatic Resource Classification

Conduct smart queries, investigate, and automate by associating resources with related context; for example:

- Tag resource owners
- Mark sensitive data stores (buckets, DBs, etc)
- Associate resources with applications and services
- Build automation based on context

## Ermetic Cloud Infrastructure Security Platform

Ermetic is a comprehensive cloud security platform for AWS, Azure and GCP that enables you to proactively reduce your attack surface, detect threats and reduce your blast radius in case of a breach. Ermetic's holistic cloud security solution enables comprehensive risk assessment across the entire security stack – from full asset discovery and deep risk visualization, prioritization and guided remediation to anomaly detection and compliance audit.

## What Our Customers Are Saying

“If we didn't have Ermetic analyzing roles, policies and network configurations, that would easily be an additional three to four analysis. It's saving us hours and headcount.”

Dominc Zanardi  
Security Engineer, Latch
